

Noritz offers the largest selection of ENERGY STAR® qualified tankless heaters.

The DOE states that Americans can save \$156 million in utility costs annually by using high efficiency water heaters.

\$156
million
annual savings

7.3
million
tank heaters

With recyclable components and replaceable parts, Noritz tankless water heaters will help reduce the 7.3 million traditional tank-type water heaters disposed into landfills each year in the U.S.

6.7
million cars

If every U.S. household installed a Noritz tankless water heater the CO2 savings would be equivalent to taking 6.7 million cars off the road.

NORITZ®

Tankless...Endless Comfort

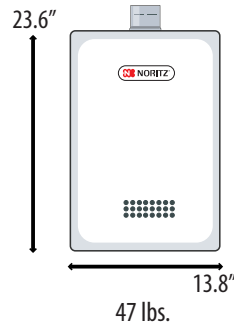

Endless... Comfort

With a Noritz tankless water heater, you'll get endless hot water and won't have to compromise or schedule your hot water use again. You'll also be heating water much more efficiently, saving energy and money. Comfort and eco-friendly is what a Noritz tankless is about.

Tank vs. Tankless

The obvious difference between a tank and a tankless is its size. Not only will you gain significant space, but you'll also get endless hot water with a tankless.

Longevity

Noritz tankless water heaters last longer than traditional tank water heaters and are backed with a 12-year warranty.

Clean Water

With a tankless, you won't be using hot water that is stored in a tank that can accumulate scale and rust over time.

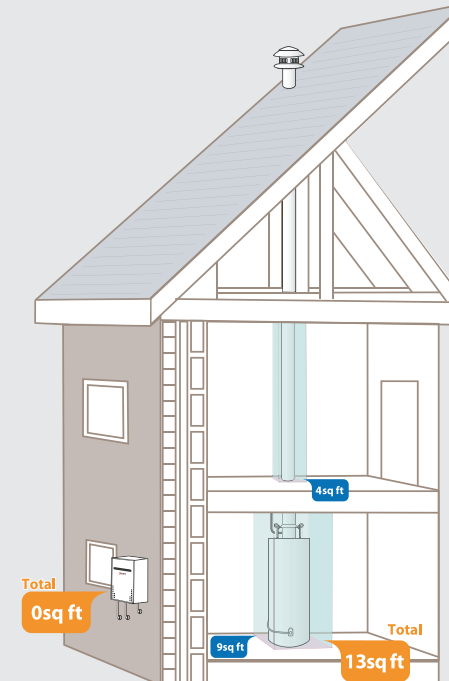

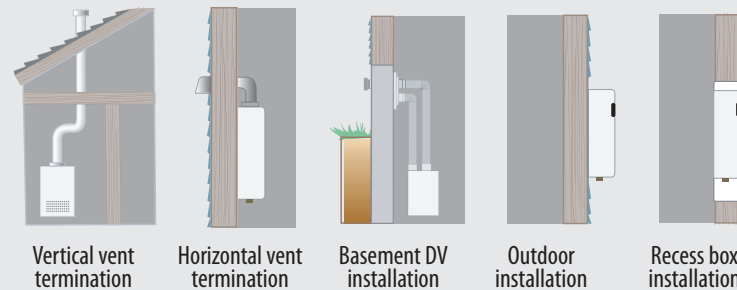

Safety

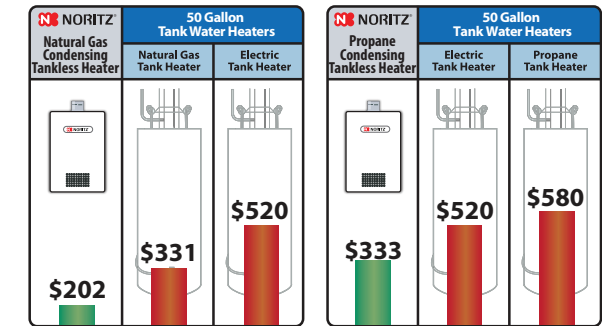

Our units are equipped with safety features to prevent scalding water from exiting your fixtures.

Flexible Installation

It's time to reclaim valuable space in your home! Noritz tankless water heaters mount on the wall and can be installed indoor or outdoor, making them versatile to install virtually anywhere. Spaces once deemed impossible with a tank, can be possible with a Noritz.

AVERAGE YEARLY OPERATING COSTS

Based on FTC Energyguide 16 CFR Part 305, using prices of \$1.218/therm for Natural Gas, \$1.87/ gal. for LP Gas, and 10.65 cents/kWh for electricity as published in the 08/29/2007 DOE Federal Register Notice, Vol. 72 No.167.

Noritz tankless heaters are 83-94% efficient compared to a tank water heater's 60% efficiency. Our on-demand systems require no standing pilot light and can save about half the cost of your current water heating bill.

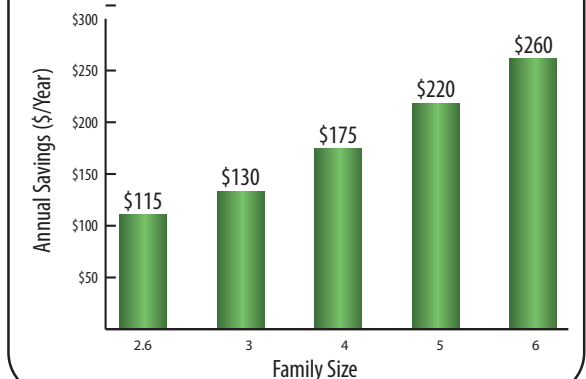

ENERGY STAR Qualified

(NRC111-DV)

If "green" is your thing, then look no further. Noritz condensing units are over 93% efficient and because they are condensing, less expensive PVC venting can be used.
